

YUBA WATERWORKS

An engineering schematic of every major dam, tunnel, canal & powerhouse

Flow runs east → west: headwaters at right, valley at left — matching the map view · not to scale · reservoir symbols scale with log capacity

2,359,000 af

average year's unimpaired runoff — swings 369,000 (1977) to 5,604,000 (2017)

1.43M af

storage in the reservoirs shown — two-thirds of it behind New Bullards Bar

~676 MW

installed hydropower across the basin's four interlocked FERC projects

200,000 af/yr

leaves the basin for the Bear via Drum Canal — about 8% of runoff
